Question: The packet of information regarding this bid does not mention anything about specific well depths / depths to water other than a reference of 22 to 37 feet to water, dependant on location. This 15 foot variability in depth to water would influence the bid at both the soil boring and water sampling end.

Could you please provide some information as to the depth of wells and depth to water at the various well locations.

Answer: A table containing monitoring well elevations, well depths, and depth to water has been scanned to be made available on the bidding website under the Q and A section.
