I was putting together a bid for the Wisconsin Academy LUST site (53925-9520-55-A). I wondering if the file has a site map which would show the property lines. Given the small volume of soil that is being removed, it may be most cost-effective to remediate excavated soils on site using passive aeration and biodegradation (on plastic), however, I don't want to propose that in the bid unless I am sure that there is the area available on site.

The investigation consultant provided a property boundary map in the March 13, 2002 correspondence to Commerce. It appears the campus covers several hundred acres.
